# Malaysian Sustainable Palm Oil (MSPO)

The Malaysian Standard on Malaysian Sustainable Palm Oil (MSPO), MS 2530:2013 address sustainability issues and challenges in relation to the multi-stakeholders involves in the industry.

The standard describes the sustainability requirements for the production throughout the supply chain from the raw materials until the transport to consumer and makes it possible for each group of players to perform their respective roles and functions in the following ways:

**1** stakeholders will be able to exercise their interests by tracing all activities throughout the oil palm supply chain and monitor the established sustainability standards; and

**2** managers of oil palm premises and other relevant facilities along the supply chain will be able to understand the roles they need to play within their respective spheres and the actions that are needed to support and achieve the goals of sustainability.

## The 7 Principles of MSPO

- 1 Management commitment & responsibility
- 2 Transparency
- 3 Compliance to legal requirements
- 4 Social responsibility, health, safety & employment conditions
- 5 Environment, natural resources, biodiversity & ecosystem services
- 6 Best practices
- 7 Development of new planting

## Scope of MSPO

The standard covers the areas of operations of the oil palm industry along the whole supply chain comprising seed production, nursery, estate, smallholdings, mill, kernel crushing, refinery, storage, transport, distribution, and management system development and operations.

The Malaysian Standard provides general principles on the requirements for plantations and organised smallholders to establish, maintain and improve their operational practices within a management system framework, which enables the adoption of a systematic and integrated approach towards attaining sustainable production of palm oil.

## Malaysian Standard : MS 2530

MS 2530:2013 was developed by the Technical Committee on Fats and Oils under the authority of the Industry Standards Committee on Food, Food Products and Food Safety. Development of the standard was carried out by the Malaysian Palm Oil Board (MPOB) which is the Standards-Writing Organisation (SWO) appointed by SIRIM Berhad to develop standards for palm oil products, oil-based food products, palm kernel products and oil-palm based products.

MS 2530:2013 consists of the following parts, under the general title, Malaysian Sustainable Palm Oil (MSPO):

- P1** : General principles
- P2** : General principles for independent smallholders
- P3** : General principles for oil palm plantations and organised smallholders
- P4** : General principles for palm oil mills
